SAMHIS Project Information

Project Objective

The objective of the SAMHIS project is to create a website that Mental Health and Substance Abuse providers can use to upload their quarterly files to DSAMH using the internet. Two file formats will be uploaded; Mental Health Event file format and TEDS file format. Providers will validate files prior to uploading them using the supplied SAMHIS Client File Validation Application. Validation errors must be resolved prior to uploading the files to the website. The SAMHIS system will validate all fields in the files and then load the data into the database for analysis and reporting. Website communication will use SSL to ensure that the data is secure between Providers and the state. The system will attempt to associate a State of Utah HLCI (high level client indicator) to each client record. Aggregate data (non-identifiable data) will be moved to the department data warehouse and used for reporting purposes. Response files will be created for each Provider file that has successfully processed through the system. SAMHIS Response files will contain the client HLCI number which Providers should use on subsequent data file submissions to the SAMHIS system.

Project Milestones

Status	Date	Description
✓	2/2006	Project Kick off meeting
✓	3/1/2006-5/15/2006	System requirements, analysis, design and start coding
✓	5/24/2006	Provider meeting
	5/24/2006	Define list of Providers for testing new system.
	6/15/2006	Complete Provider Login ID's in UMD
	6/23/2006	WebServer Put into DTS for internal testing.
	6/30/2006	Provider File Validation Application available for testing.
	7/1/2006	SAMHIS available for Provider *Test* file uploads
	7/1/2006-9/30/2006	SAMHIS system testing and enhancements
	10/1/2006	SAMHIS available for *Production* file uploads.
